TITLE : FOLDING SEAT FOR VEHICLE

ABSTRACT : PURPOSE: To simplify the structure, reduce the weight, and reduce the cost by loading a striker at the side of a seat back on a supporting part which is engaged with a hinge of a seat cushion and provided with the extended end part of a bracket mounted on a vehicle body, and using the back surface as a part of a luggage compartment floor.

CONSTITUTION: One end of a hinge 4 is mounted on the bottom of a seat cushion 1, and the other end is pivotably supported by a bracket 6 with a pin 5, and the upper end of this bracket 6 is extended upward, and folded inward the cabin to form a supporting part 8 so that a striker provided on the upper side of the seat back may be loaded here when the seat back 2 is collapsed. Thus, neither weight nor cost is increased, and a luggage compartment can be expanded with simple constitution.
